ACRIDOIDEA DIVERSITY OF HASTINAPUR WILDLIFE SANCTUARY, UTTAR PRADESH, INDIA

NARENDER SHARMA AND S. K. MANDAL

Zoological Survey of India, M-Block, New Alipore, Kolkata-700 053, India

INTRODUCTION

Hastinapur Wildlife Sanctuary lies along the banks of the Ganga in Western Uttar Pradesh. The sanctuary was established mainly to accord protection to Swamp Deer *Cervus duvauceli duvauceli*, the state animal of Uttar Pradesh, and to conserve the fast vanishing, unique biome, locally known as Gangetic Khadar. It is unique in that it contains a variety of landforms and habitat types such as wetland, marshes, dry sand beds and gently sloping ravines known as Khola. Till a few decades ago (before 1980s), the Gangetic Khadar had extensive tracts of tall wet and dry grass, and khola had luxuriant forests. However, today much of the natural vegetation has been lost due to industries, human settlements and cultivation. Thus, the sanctuary is a highly disturbed protected area. The sanctuary is located between $78^{\circ} 08' 47''$ E longitudes and $29^{\circ} 32' 28''$ N latitudes. The temperature varies from 0° – 48°C and the rainfall is more than 1000 mm. The sanctuary supports 180 species of birds. The vegetation of this sanctuary can be classified into tall wet grasslands, dry short grasslands, scrub and plantations (Nawab 2000).

Short-horned grasshoppers are included in the Superfamily Acridoidea. They are moderate in size, but range from less than 10 mm to 65 mm. The form of body shape, head and thorax are diverse; antennae are filiform but sometimes ensiform; tarsi three segmented; hind femora long, slender and thick towards base and adapted for leaping; wings are either fully developed or reduced or absent; forewings in the form of leathery tegmina; hind wings fan like; male external genitalia complex, symmetrical and concealed, when not in use, by the enlarged ninth abdominal sternum (Subgenital plate).

The most notable work on Indian grasshoppers was made by Kirby (1914). Later on Bolivar (1914, 1918), Uvarov (1921, 1923, 1925, 1927, 1929, 1940, 1940a, 1940b, 1942) have also studied the Orthoptera of Indian subcontinent. Willemese (1955) has studied the Orthoptera of Indo-Malayan

region. Later on Henry (1940), Dirsh (1954, 1958), Dirsh & Uvarov (1953), Banerjee and Kevan (1960), Hollis (1965, 1968, 1971, 1975), Mason (1973) and Ritchie (1981, 1982) have taxonomically treated several genera. Tandon (1975, 1976) and Tandon & Shishodia (1969, 1976, 1977) have studied Indian grasshoppers from different states. Shishodia & Hazra (1985, 1986) have studied the Acridoidea fauna of Silent Valley (Kerala), and Namdhapa (Arunachal) Pradesh. Bhowmik (1986) gave an account of the Acridoidea Fauna of West-Bengal, specially of North-Bengal. Further, Hazra *et. al.* (1993) have studied Acridoidea Fauna of West-Bengal.

The present paper deals with 25 species belonging to 2 families and 21 genera. All the species are reported from the sanctuary for the first time. Classification followed here is according to Uvarov (1966).
